

Environmental policy

- It is a matter of course for us to fulfill all German and European environmental regulations and all binding obligations to the highest possible standard and to continuously improve the environmental management system.
- We are committed to building up active environmental protection in all areas of activity, with activities in buildings and facilities, as well as in administration, are linked with each other.
- We promote the environmental awareness and responsibility of our staff and ensure that education, training and further education are offered in environmentally relevant areas.
- The aim is to continuously reduce the consumption of resources and energy and to minimise emissions and waste so that a contribution is made to environmentally friendly development.
- Special consideration should be given to environmental impacts in investments and procurements. Accordingly, the most environmentally friendly variants are given preference wherever possible. Suppliers and contractors should be involved in efforts to improve environmental protection.
- With the voluntary implementation of the environmental management system according to DIN EN ISO 14001, Ebco has been strengthening its efforts for effective and sustainable environmental protection since 2009, thus supporting the achievement of its annual environmental goals.
